

User Story on “Prescriptions & Medical Reports (Patient)”

Card:

As a : Patient

I want : To view, download, and upload prescriptions and medical reports

So that: I can maintain a complete digital health record and share it with doctors when needed

Conversation:

1. Patient logs in → goes to “**Prescriptions & Reports**” from sidebar.
2. Page shows past prescriptions (medicine, date, doctor).
3. Each prescription has a “**Download PDF**” button.
4. Patient can **upload reports** (PDF/JPG/PNG) with optional notes.
5. Uploaded files are stored securely and linked to patient history.
6. A **medication tracker** lets patient mark doses + set reminders.
7. Patient gets a **notification** when doctor adds a new prescription.
8. Data is shown in **date order** and searchable by doctor/date.
9. UI uses **responsive cards + icons** (easy on mobile/desktop).
10. Only **logged-in patients** can see their own prescriptions & reports.

Confirmation:

Success

1. Patient can open **Prescriptions & Reports** from dashboard.
2. Past prescriptions show doctor, date, and medicines.
3. **Download PDF** works correctly.
4. Patient can **upload reports** (PDF/image) with notes.
5. Uploaded files appear in list with time + icon.
6. Files are saved securely and linked to patient record.
7. **Medication tracker** shows schedule + lets mark doses as “Taken.”
8. Patient gets **notification** when doctor adds a prescription.
9. UI works smoothly on mobile & desktop.
10. Only logged-in patients can use these features.

Failure

1. Not logged in → redirected to login.
2. PDF download fails → “Unable to download.”
3. Upload fails (wrong file/too big) → error shown.
4. No internet → “Check connection.”
5. Unauthorized access blocked (can’t see others’ records).
6. Server/storage down → “Service unavailable.”
7. No file chosen → “Select a file to upload.”
8. Session expired → login again.
9. No records → message: “No prescriptions or reports yet.”
10. Duplicate uploads allowed but shown with timestamps.
